

Making Accurate Diagnoses

Accurate diagnosis is critical for treatment planning and documentation of medical necessity. Misdiagnosis is common. Therapists can think more deliberately by using critical thinking and being aware of ways to reduce the likelihood of cognitive biases. You will have a practical, systematic way of making diagnoses using the DSM-5-TR and being aware of questionnaires that can facilitate the gathering of necessary information. Cultural factors will also be considered within the context of the DSM-5-TR. There will be a focus on differential diagnoses in exploring major depressive disorder and PTSD.
